PROFESSIONAL SUMMARY

I'm a full-stack developer at YouX Powered, working on Manage 2.0, the main platform behind DriveIQ, a fintech asset finance application used by brokers, dealers and lenders across Australia and New Zealand. I work across the whole stack: building the React frontend, the Node.js services behind it, and the AWS infrastructure they run on, and I usually take a feature from the first discussion through to deployment. I use AI tools like Cursor and Claude every day to help me write, review and debug code. I like to understand who's going to use what I'm building, and I'm comfortable asking questions when the requirements aren't clear. Outside of work I built SolarCRM on my own, a multi-tenant SaaS for Australian solar installers, with server-side pricing, JWT auth and a full Jest, React Testing Library and Playwright test setup.

WORK EXPERIENCE

Software Developer | YouX Powered

Jul 2025 – Present | Sydney, Australia

- **Manage 2.0 Core Platform:** built large parts of the new version of DriveIQ's core management app, replacing the v1.0 platform brokers, dealers and lenders use daily. I worked on the dashboard, worklist, kanban board, Quick Quote flow, navigation, and user and organisation management, using Next.js, React and TypeScript with Node.js APIs and MongoDB.
- **User Agreement Templates:** built the automated user-agreement feature: an admin editor for writing licence-agreement templates with dynamic fields, assigning them to organisations, and version control with a draft, published and archived flow. Once published, users must accept the agreement at their next login before using the system. Permission-controlled and live across all production instances.
- **Privacy Document Generation:** built the combined privacy document feature end to end: a lender-privacy data model and editor, the API that merges an organisation's privacy form with its lenders' forms and the application data into one PDF with fields filled in at runtime, and the UI that generates it. This replaced a manual process with an automatic one.
- **Lender Document Management:** built the lender document management feature so administrators can upload a lender's policy documents once and apply them across every instance, with help-centre visibility rules that show each user only their own organisation's lender documents, sorted by lender name.
- **Banner Messaging System:** built a real-time banner messaging system for Manage, with shared TypeScript types, a Storybook component, an admin CRUD screen and the REST API behind it, so the support team can message users without needing a developer.
- **Driver-Licence OCR:** extended the OCR feature to read licences from every Australian state and New Zealand, including the back of the licence, then connected it into the application flow to check the extracted details against what the applicant entered.
- **Insights Analytics Integration:** helped bring the separate Insights analytics product into Manage, migrating 12+ dashboard pages, reworking the sidebar navigation, and setting up the shared Storybook component library now used across newer features.
- **Security & Data Encryption:** built a shared TypeScript package for AWS KMS encryption and standard external-API logging, published it to a private Verdaccio registry, and rolled it out across 8 microservices so personal data is encrypted in the logs. I also moved services onto IAM-role authentication with environment-isolated S3 buckets, removing hard-coded credentials from production.
- **Partner-Brand App Refactor:** currently leading a refactor of a partner-brand Next.js app onto AWS Amplify, Serverless Lambda and Secrets Manager, splitting the frontend and backend and modernising deployment.

Software Developer — Intern | YouX Powered

Mar 2025 – Jul 2025 | Sydney, Australia

- **Platform Delivery:** joined the DrivelQ team from the first sprint, working on Manage 2.0 across Next.js, React, TypeScript, Node.js and MongoDB. I shipped production fixes across the Quick Quote flows, user and organisation management, and document workflows, and worked with QA and Support on customer-reported issues. Moved to a full-time role after four months.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript
- **Frontend:** Next.js, React, Storybook, Tailwind CSS, Framer Motion, HTML, CSS
- **Backend:** Node.js, Express, REST APIs, Server-Sent Events; JWT and OAuth 2.0 (Google sign-in)
- **Cloud & Infrastructure:** AWS (S3, KMS, IAM, Lambda, Amplify, Secrets Manager), Vercel
- **Database:** MongoDB
- **Testing:** Jest, React Testing Library, Playwright (end-to-end)
- **Tools & Practices:** Git, GitHub, Bitbucket, Jira, Figma, Redux; code review, secure coding, microservices, Agile
- **AI Tools:** I use Cursor and Claude every day for writing, refactoring and debugging code, while still reviewing everything carefully before it ships
- **Currently Learning:** AWS EC2, Docker and containerisation, GitHub Actions CI/CD

PERSONAL PROJECTS

SolarCRM — Multi-tenant SaaS for Australian Solar Installers | solarjobflow.com

- Built it end to end on my own as a multi-tenant SaaS covering the full lead, quote and job lifecycle: React dashboards with live pipeline analytics, plus the API routes, data models and subdomain-based workspaces, keeping each tenant's data separate.
- Did the quote pricing on the server so it can't be tampered with, with GST-inclusive calculations and automatic STC rebate amounts by postcode zone, following the Australian solar incentive rules.
- Handled auth and security (JWT sessions, per-tenant isolation, fail-closed Upstash rate limiting) and added Twilio SMS, Resend email and AWS S3. Covered by Jest, React Testing Library and Playwright tests, deployed on Vercel.

Expense Tracker — Personal, Family & Events Spending Dashboard | sr-expense-tracker.vercel.app

Personal Portfolio — Next.js 15 Site | sadi1820.vercel.app

EDUCATION

Master of Information Technology (Software Design and Development)

Central Queensland University, Sydney, Australia — GPA 5.786 / 7.00 | Nov 2023 – Jul 2025

Relevant coursework: Software Engineering (HD), Introduction to Programming (HD), Distributed Systems, Database Design and Development, Data Structures and Algorithms, Cloud Computing & IoT, App Development for Mobile Platforms.

Bachelor of Science in Computer Science and Engineering

IUBAT, Dhaka, Bangladesh — GPA 3.67 / 4.00 | May 2018 – Apr 2022

ADDITIONAL INFORMATION

- **Work Rights:** I hold valid Australian working rights, I'm based in Sydney, and I'm happy to work fully remote.
- **Awards:** Best Mentor Certificate, IUBAT CSE Department (Fall 2019); promoted from intern to full-time at YouX Powered after four months (Jul 2025).
- **Mentoring & Leadership:** Academic Mentor, IUBAT CSE Department (2019–2022); Assistant Academic Manager, IUBAT IT Society.
- **Languages:** English (CEFR B2); Bengali (native).
- **Referees:** Available on request.
